

# AIRFIL FILTERS

A Finnish filter  
guarantees the best  
functionality!

A FINNISH EXPERT ON HIGH-QUALITY FILTERING

**AIRFIL  
FINLAND**

# *Finnish filtration expertise at its best!*

**AIRFIL  
FINLAND**

Effective filtration and removal of different impurities ensure machines and systems work dependably and cost-effectively. Finnish Airfil Oy is a filtration specialist. Founded in 1981, Airfil offers an extensive selection of filters and oil separators for use in vehicle maintenance, industry, power plants, properties and manufacturing of machinery and devices.

## ***Filters for industry and energy production***

One of Airfil Oy's strongest production areas is air and liquid filters and separators for use in industry, energy production, power plants and different maintenance tasks. The required filters are defined by the specific field of activity, its processes and sector of production. Airfil flexibly manufactures and delivers all filter elements and separators – including those that require special knowledge and capabilities.

*Airfil Oy manufactures replacement filter elements for the following main uses:*

### **LIQUID FILTRATION**

- hydraulic and lubrication systems
- process water

### **AIR FILTRATION**

- suction and circulation systems: cartridges, panels, cassettes, bags, HEPA, ULPA
- dust filters: cartridges, hoses

## Clean and dust-free air by air filtration

Removing impurities and dust from air intake is very important for dependable function of machinery. Airfil filters, made from the best materials, have established their place both in industry and vehicle use. In addition to high quality, the strengths of our comprehensive selection are its versatility, the long service life of Airfil filters, great availability and very competitive pricing. You can always trust Finnish filtration expertise!

*We also manufacture made-to-measure specialised filters according to the customer's needs. We deliver small and big batches quickly.*

## Clean Finnish expertise!

All activities of Airfil Oy revolve around the high quality of our filters and separators, constant product development, fast delivery capabilities, decades of experience and an uncompromising willingness to respond to the challenges of the times and the needs of our clients. Airfil Oy is capable of offering comprehensive services and providing considerable savings to customers who choose us as their preferred provider. Airfil Oy offers clean Finnish filtration expertise – for the best of the environment and our clients!

## ***Filters for machinery and transport equipment***

Heavy transport equipment is used in extremely demanding environments and conditions with dust, moisture, temperature changes, near-maximal loads and many other circumstances that place special demands on the machines. Airfil Oy manufactures and delivers all filters for heavy equipment and machinery, such as so-called Heavy Duty filters that have a great capacity of separation and the longest possible service life. Airfil Oy also provides a comprehensive selection of replacement elements for hydraulic systems. Concentrating your purchases with Airfil Oy together with our quick delivery, ensure long maintenance intervals and minimal down time for equipment that operates in demanding conditions. Airfil Oy knows the specific characteristics and needs of its customers and can prepare for them.

*Filters for machinery and transport equipment form a considerable portion of Airfil products.*

## ***Eko-filter***

*Airfil uses glass fibre material in hydraulic filters, which ensures the best filtration rating, longevity and functionality in changing weather conditions. The environmentally friendly EKO filters are constantly developed.*

## Filters for properties

Rapidly developing technical building services and air conditioning are part of modern construction. Airfil filters guarantee clean air for residents and office workers. Every year, heavy industry and different branches of manufacturing face increasing requirements for removing impurities from the exhaust their operations generate as well as from the air their employees breathe. Airfil Oy rises to the challenge by providing filters that are adapted to the specific characteristics of every destination.

*Increased impurities in our environment increase the need for air filtering in many places. We also have plenty of experience with finer air filtering (HEPA, ULPA) and using active carbon together with fine filtration in properties, for example.*

*Even our name, Airfil Oy, has from the very start required us to manufacture high-quality air filters. Airfil AFA air filters, for example, are among the best-selling aftermarket brands in Finland due to constant, market-oriented product development and the right price-quality ratio.*

The modern, flexible and ecological Airfil Oy manufacturing facility has been awarded the ISO 14001 environmental certificate and the ISO 9001 quality management certificate.

## The best quality!

Airfil Oy's selection includes over 10,000 products. Most products are in stock, ready to be delivered. In addition, Airfil Oy manufactures specialised, made-to-measure filters according to customers' wishes.

### Our selection includes:

- air filters
- hydraulic filters
- oil separators
- fresh air and air conditioning filters and filter sheets
- suction filters
- breathers
- compressed air filters
- water filters
- specialised made-to-measure filters
